583 Prime Factors

Webster defines *prime* as:

prime $(pr\bar{i}m)$ *n*. [ME, fr. MF, fem. of *prin* first, L *primus*; akin to L *prior*] 1: first in time: **original 2 a**: having no factor except itself and one $\langle 3 \text{ is a } \sim \text{number} \rangle$ b : having no common factor except one $\langle 12 \text{ and } 25 \text{ are relatively } \sim \rangle$ **3 a**: first in rank, authority or significance: **principal b**: having the highest quality or value $\langle \sim \text{ television time } \rangle$ [from *Webster's New Collegiate Dictionary*]

The most relevant definition for this problem is 2a: An integer g > 1 is said to be *prime* if and only if its only positive divisors are itself and one (otherwise it is said to be *composite*). For example, the number 21 is composite; the number 23 is prime. Note that the decomposition of a positive number ginto its prime factors, i.e.,

$$g = f_1 \times f_2 \times \cdots \times f_n$$

is unique if we assert that $f_i > 1$ for all i and $f_i \leq f_j$ for i < j.

One interesting class of prime numbers are the so-called *Mersenne* primes which are of the form $2^p - 1$. Euler proved that $2^{31} - 1$ is prime in 1772 — all without the aid of a computer.

Input

The input will consist of a sequence of numbers. Each line of input will contain one number g in the range $-2^{31} < g < 2^{31}$, but different of -1 and 1. The end of input will be indicated by an input line having a value of zero.

Output

For each line of input, your program should print a line of output consisting of the input number and its prime factors. For an input number g > 0, $g = f_1 \times f_2 \times \cdots \times f_n$, where each f_i is a prime number greater than unity (with $f_i \leq f_j$ for i < j), the format of the output line should be

 $g = f_1 \ge f_2 \ge \dots \ge f_n$

When g < 0, if $|g| = f_1 \times f_2 \times \cdots \times f_n$, the format of the output line should be

g = -1 x f_1 x f_2 x ... x f_n

Sample Input

-190 -191 -192 -193 -194 195 196 197 198 199 200 0

Sample Output
